Parul Jindal

AI ENGINEER

Boston, MA | paruljindal67@gmail.com | linkedin.com/in/jindal-parul | github.com/Parul671992 | parul671992.github.io

SUMMARY

Software engineer with 7+ years shipping production full stack software (Java, Spring Boot, Angular, REST APIs, PostgreSQL), including 3 years as a Technical Lead who mentored engineers. Over the past year, has built agentic AI systems in Python (multi-step orchestration, tool calling, MCP, checkpointing, RAG, evaluation, tracing, and human-in-the-loop) and an LLM gateway in Java with caching, budgets, and provider failover.

AI / ML SKILLS

Frameworks: LangGraph, LangChain, CrewAI, agentic workflow design, multi-agent orchestration, human-in-the-loop

RAG / Retrieval: Chroma vector database, HuggingFace embeddings, chunking, retrieval and grounding

LLM Tooling: LLM APIs (Groq, Gemini), tool calling, MCP (FastMCP), structured outputs, prompt engineering, LangSmith

Core Engineering: Python, Java, JavaScript/TypeScript, Angular, Spring Boot, Microservices, REST APIs, JUnit

Cloud & Data: AWS, PostgreSQL, Redis, Apache Kafka, MySQL, SQL, Kubernetes

Tools: Docker, Docker Compose, n8n, GitHub Actions, Git, Jenkins CI/CD, Jira, Cursor and Claude (AI coding)

EXPERIENCE

Verizon, Technical Lead | Dallas, TX Jun 2021 - Mar 2024

- Developed a real-time UI used by customer-facing teams to analyze about 150 data-translation calls a day, cutting analysis time from 6 days to a few hours (Angular, Spring Boot, Bootstrap, REST API, WebSocket).
- Built a new backend microservice and its front end for the customer ordering application, integrating with the existing ordering system (Spring Boot, Angular, REST APIs).
- Restructured core database components and migrated order processing off a legacy system onto microservices, cutting run-time by 45% (Spring Boot, PostgreSQL, SQL).
- Provided technical leadership on a team of 8: onboarded and mentored 3-4 software engineers, led code reviews and technical design discussions, and represented the team in stakeholder meetings and stand-ups.

Orange Business Services, Software Engineer | Gurugram, India Jul 2014 - Jun 2018

- Built a REST API surfacing equipment and circuit price-quotation data from an upstream system, cutting retrieval time by more than half (Spring Boot, JavaScript, Oracle 12, WebLogic).
- Handled production support, on-call, and root-cause analysis; categorized complex issues from Business/Crisis Management teams and fixed process-flow gaps, raising customer satisfaction by 70% (Exemplary Performance award).

PROJECTS

Independent Projects | parul671992.github.io Aug 2025 - Present

- Built an agentic upskilling planner with multi-step LangGraph workflows, custom tools, a self-critique loop capped at 3 rounds, and RAG over user documents (Chroma); rebuilt it in CrewAI and documented 5 framework bugs.
- Built an evaluation suite of 6 test cases scored by 4 automated checks (grounding, plan validity, iteration cap, invented links) and 15 pytest unit tests; the grounding check caught hallucinated course links.
- Added human-in-the-loop approval with LangGraph interrupts and checkpointing, and exposed the planner as an MCP server with 3 tools, run in Docker Compose with an n8n workflow from form to email delivery.
- Built a multi-tenant LLM Gateway in Java 21 and Spring Boot with per-customer API keys, rate limits, and budgets; Redis caching with stampede protection (20 identical requests, one LLM call); and Groq to Gemini failover.
- Built a real-time bus bunching detector as three Spring Boot microservices on Apache Kafka that stream live MBTA bus positions, with a dead letter topic and GitHub Actions CI.

EDUCATION

New England College, Henniker, NH *Apr 2024 - Apr 2026*

Master of Science, Information Technology Project Management

Northeastern University, Khoury College of Computer Sciences, Boston, MA *Jan 2019 - Dec 2020*

Master of Science, Computer Science

Jaypee University of Information Technology, India *Jul 2010 - May 2014*

Bachelor of Technology (B.Tech), Information Technology
