Parul Jindal

FULL STACK SOFTWARE ENGINEER

Boston, MA | paruljindal67@gmail.com | linkedin.com/in/jindal-parul | github.com/Parul671992 | parul671992.github.io

SUMMARY

Full stack software engineer with 7+ years designing, building, and supporting production backend and web systems in Java, Spring Boot, microservices, REST APIs, SQL, and Angular/TypeScript, including 3 years as a Technical Lead who mentored engineers and led code reviews. Recently built independent projects in Java with Kafka, Redis, and Docker, plus AI agent systems in Python (LangGraph, RAG, MCP).

TECHNICAL SKILLS

Languages: Java, Python, JavaScript/TypeScript, SQL, HTML/CSS

Backend: Spring Boot, Microservices, REST APIs, Hibernate, JUnit, Testcontainers

Front End: Angular, TypeScript, Bootstrap, WebSocket

Data & Messaging: PostgreSQL, Oracle, MySQL, Redis, Apache Kafka

Cloud & DevOps: AWS, Docker, Docker Compose, Kubernetes, Jenkins CI/CD, GitHub Actions, Git, Jira, Agile/Scrum

AI: LangGraph, RAG, MCP, LLM APIs, Cursor and Claude (AI-assisted development)

EXPERIENCE

Verizon, Technical Lead | Dallas, TX Jun 2021 - Mar 2024

- Developed a real-time UI used by customer-facing teams to analyze about 150 data-translation calls a day, cutting analysis time from 6 days to a few hours (Angular, Spring Boot, Bootstrap, REST API, WebSocket).
- Built a new backend microservice and its front end for the customer ordering application, integrating with the existing ordering system (Spring Boot, Angular, REST APIs).
- Restructured core database components and migrated order processing off a legacy system onto microservices, cutting run-time by 45% (Spring Boot, PostgreSQL, SQL).
- Provided technical leadership on a team of 8: onboarded and mentored 3-4 software engineers, led code reviews and technical design discussions, and represented the team in stakeholder meetings and stand-ups.

Orange Business Services, Software Engineer | Gurugram, India Jul 2014 - Jun 2018

- Built a REST API surfacing equipment and circuit price-quotation data from an upstream system, cutting retrieval time by more than half (Spring Boot, JavaScript, Oracle 12, WebLogic).
- Built an automated order-processing workflow, taken to production, that cut total cycle time by 8 days (Spring, Jenkins).
- Handled production support, on-call, and root-cause analysis; categorized complex issues from Business/Crisis Management teams and fixed process-flow gaps, raising customer satisfaction by 70% (Exemplary Performance award).

PROJECTS

Independent Projects | parul671992.github.io Aug 2025 - Present

- Built a multi-tenant LLM Gateway in Java 21 and Spring Boot with per-customer API keys, rate limits, and budgets in PostgreSQL; Redis caching with stampede protection (20 identical requests, one LLM call); and Groq to Gemini failover.
- Built a real-time bus bunching detector as three Spring Boot microservices on Apache Kafka that stream live MBTA bus positions, with a dead letter topic, at-least-once delivery, and GitHub Actions CI.
- Built an agentic upskilling planner in Python and LangGraph with RAG, a self-critique loop, human-in-the-loop approval, an evaluation suite, and an MCP server, run in Docker Compose.

EDUCATION

New England College, Henniker, NH *Apr 2024 - Apr 2026*

Master of Science, Information Technology Project Management

Northeastern University, Khoury College of Computer Sciences, Boston, MA *Jan 2019 - Dec 2020*

Master of Science, Computer Science

Jaypee University of Information Technology, India *Jul 2010 - May 2014*

Bachelor of Technology (B.Tech), Information Technology
